## Constant Price GDP, Analysis of Percentage Contribution, 3rd Quarter 2022

### Basic Prices

The basic price is the amount receivable by the producer exclusive of taxes payable on products and inclusive of subsidies receivable on products. The equivalent for imported products is c.i.f. (cost, insurance and freight) value, i.e. the value at the border of the importing country

### Producer Price

The producer price is the amount receivable by the producer inclusive of taxes on products except deductible value added tax and exclusive of subsidies on products. The equivalent for imported products is the c.i.f. value plus any import duties or other taxes on imports (minus any subsidies on imports)

*Producer prices = Basic prices + taxes on products (excluding VAT) - subsidies on products*

### Purchaser Price

The purchaser price is the amount payable by the purchaser. This includes trade margins realised by wholesalers and retailers (by definition, their output) as well as transport margins (i.e. any transport charges paid separately by the purchaser) and non-deductible VAT.

*GDP at Purchaser Prices = agriculture value added + industry value added + services value added - FISM + net taxes on products*
